2年()組()番 氏名()

- 1 次の英文中の括弧 (1) ~ (20) に入る語を答えなさい。但し、文字が示されている場合はその文字から始めること。(各1点)

Unlike our biological sex, the concept of gender — masculine or feminine — is (1. f) socially and culturally. For example, society (2. a) that men should earn money and women should do housework or raise children. These assumptions about gender roles lead to gender bias.

The seeds of gender bias have been planted in us since childhood. Parents tend to give dolls or stuffed animals to their daughters, and (3. e) them to take piano or ballet lessons. In (4. c), sons are often given toy cars or video games, and are encouraged to join a soccer or baseball team. Our (5.) begin to be influenced before our identity is fully (6. e).

Gender bias is everywhere and can keep us from (7. r) our dreams. For instance, it discourages women from becoming pilots or men (8.) becoming flight attendants. This is (9. h) gender bias leads to major gender gaps. In order to focus on gender-related problems, the *Global Gender Gap Report* has been published every year since 2006.

Gender gap problems can often be seen in education. Around the world, girls tend to (10. r) less school education than boys. UNICEF reported shocking details about boys and girls between 15 and 19. Worldwide, (11. w) 10% of those boys are not in education, employment, or training, the rate for girls is nearly 25%. Most of these girls have to do childcare and domestic (12.) at home. These gaps may come from (13. r) beliefs and cultural traditions.

We can also see gender gaps in economics and politics. For example, in Japan, the percentage of female leaders is (14. e) low. A survey in 2019 showed that Japan was (15.) 144th out of 146 countries in women's political (16.). In Northern European countries, on the other (17.), a lot of women are working as leaders. In these countries with smaller gender gaps, people (18. f) hard for gender equality. Through policy (19.) and education, people's attitudes have (20. e)

2x as extended
norms

- 2 次の英文の括弧 (1) ~ (20) に入る語を下の語群から選び、必要があれば形を変えて答えなさい。但し、その場合でも2語以上になることはない。また、それぞれの語について、複数回使わないこと。(各1点)

Men as well as women (1.) gender inequalities. In Japanese society, men are often expected to (2.) work first, rather than their families or personal lives. For example, men are (3.) likely to take parental leave due to the pressure from society's gender norms.

Furthermore, gender bias can (4.) men's career choices. Young men are sometimes told, "You must choose a job that is suitable for men." In one case, a male student entered college to study childcare. There, he found very few male restrooms, and even worse, no changing room for men. He clearly felt he was not (5.) there as a student.

Finally, there are gender minorities who have a range of special identities. We need to recognize the inequalities they (6.) in their daily lives. For instance, issues (7.) to uniforms, restrooms, and changing rooms are yet to be (8.). What is worse, some minorities (9.) to live freely, (10.) fear of being rejected.

Do you know a traditional garment (11.) a kilt? It is a knee-length "skirt," originally from Scotland. It is (12.) by men, which is quite normal for Scottish people. However, it might look (13.), at least for those who grew up (14.) men do not wear skirts. This is because how we view fashion and dress (15.) has been influenced by gender bias.

There is a (16.) trend of (17.) gender bias in school uniforms. Some schools in Japan allow students to choose pants or skirts for their uniforms regardless of their biological sex. Recently, there is a movement to introduce unisex uniforms.

In current fashion trends, the distinction between men and women is (18.). Young people enjoy fashion beyond gender, wearing any color or style they like. Even wearing makeup is becoming popular among young men these days.

In today's society, gender diversity is increasingly being (19.). We should create an (20.) society where all people can express their own identities.

- 3 次の英文中にある括弧 (1) ~ (5)、及び (A) ~ (E) について、文脈に合う英文をア~オ、またカ~コの中から一つ選び、記号で答えなさい。但し、同じ記号を複数回使ってはならない。(各1点)

Tomoka is giving a presentation on geoengineering.

Tomoka: Today, I'm going to talk to you about "geoengineering." (1 λ) The most serious problem for our planet is the increase of greenhouse gases that can cause global warming. In fact, carbon dioxide (CO₂) accounts for a significant percentage of these gases. The world has long tried to cut CO₂ emissions in various ways. (A λ)

(B η) Clouds, the atmosphere, and all of Earth's surfaces reflect about 30% of the energy from the sunlight reaching Earth. (2 λ) So, one possible way of applying SRM is to release special reflective aerosols into the upper atmosphere. (C η) Introducing SRM could address global warming quickly and effectively.

Sam asks Tomoka questions about her presentation.

Sam: Thanks for your interesting presentation. SRM sounds promising, (3 γ)

Tomoka: Yes, actually there are three possible disadvantages. First, aerosols eventually fall from the atmosphere, (4 γ) Second, SRM may cause unintended consequences to the climate such as severe droughts or rainstorms. Finally, this approach does not reduce the amount of CO₂ that already exists in the air.

Sam: Wow, you really researched this topic. Did you find any direct methods to decrease the amount of CO₂ that is already there?

Tomoka: Yes, there are various ways. (5 η) Machines, which are powered by renewable energy from garbage disposal, capture CO₂ directly from the air. (D η) ~~(E η)~~ In the near future, significant amounts of CO₂ could be absorbed by these machines each year.

1 ~ 5 の選択肢

~~ア~~ but I wonder if there are any drawbacks.

~~イ~~ This is how they protect us from too much solar heat.

~~ウ~~ One approach is using industrial technology. That has already been put into practice in Switzerland.

~~エ~~ so we would need to release them regularly.

~~オ~~ It is a general term for technologies that can manipulate nature and control the Earth's climate.

A～E の選択肢

- カ One of the most practicable approaches in geoengineering is Solar Radiation Management (SRM), reflecting sunlight into space.
- キ However, it has not been very successful, so people are now focusing on geoengineering.
- ク That captured CO₂ is used to help grow vegetables in greenhouses.
- ケ They would reflect more energy from the sunlight into space.
- コ Machines, which are powered by renewable energy from garbage disposal, capture CO₂ directly from the air.

4 次の英文中にある括弧 (1) ～ (6) について、それぞれ文脈に合う単語をア～エの中から一つ選び、記号で答えなさい。(各2点)

It is true that there is a competitive element in success no matter (1) a man's profession may be, yet at the same time the kind of thing that is respected is not just success, but that excellence, whatever that may be, (2) success has been due. A man of science may or may not make money; certainly not more respected if he does than if he does not. No one is surprise to find an eminent general or admiral poor; indeed, poverty in such circumstances is, in a sense, itself an honor.

- (1) ア how イ what ウ which エ who
- (2) ア which イ to which ウ whose エ what

Chimpanzees not only learn by trial and error, which is a form of reasoning, they also apparently recognize that thoughts are agents of actions and they accordingly behave in ways which are intended to influence the states of mind of other individuals. As for (3), even less advanced primates such as vervet monkeys use different vocalizations to represent different predators: they have distinctive cries to warn their companions of leopard, eagle and snake. But there is still much about humankind which seems to set us apart from the (4) of nature: we are the only species to have advanced technology, to have a religious sense, to have values like justice and liberty, to have scientists, philosophers and poets.

- (3) ア technology イ foods ウ languages エ tools
- (4) ア almost イ all ウ half エ rest

While evoking religious faith in science, the inventor of cybernetics, Norbert Wiener, warned, in *The Human Use of Human Beings* (1950), of the danger in ceding control of moral judgment to machines. Shortly after Wiener delivered his (5), author Kurt Vonnegut Jr. published an anti-cybernetic novel. *Player Piano* (1950) projected a world where automata do everything, (6) in a techno-tyranny ruled by machines and their slaves button pushers, office bureaucrats, and corporate managers.

(5) ~~ア~~ question ~~イ~~ answer ウ warning ~~エ~~ speech

(6) ~~ア~~ resulting ~~イ~~ resulted ~~ウ~~ having resulted エ result

次の英文中にある空欄 A・B について、ア～エを正しい順番に並び替えて記号で答えなさい。(各4点)

No species, not even *Homo sapiens*, can live for itself. Ecosystems consist of non-living and living components.

A

What is good here, what bad? There are no such things in nature's original plan.

ア Such are the basic realities of life on earth as we ecologists can grasp them.

イ Principal elements of evolution, these realities provide the life process with drive and direction.

ウ These connect in diverse, mostly complex ways.

エ The living components react with and against each other, they utilize each other as sources of energy and matter, and they interact with, and modify, their non-living environments.

エ → ウ → イ → ア

Moral arguments about the death penalty might seem at first glance to be biased in favor of abolition.

B

- 7 However, those with strong views about the sacred nature of life can find only mixed support for that view in most religious texts, many of which call openly for death as punishment.
- 4 How can the taking of a precious life ever be justified?
- 7 Our moral guides are simply ambiguous about exactly how far.
- 2 Further, unless one believes in fate as the ultimate source of all human activity, then people who commit terrible deeds must, to a certain extent, be responsible for them.
